NEW HELIO-FLO PUTS THE “PLUG N’ PLAY” INTO SOLAR HOT WATER

RICHMOND, CA— Heliodyne has introduced its newest plug and play solar hot water heat transfer appliance, the Helio-Flo. The unit is an all-in-one heat transfer appliance designed for use in open loop systems or in conjunction with a closed loop integrated tank system making it versatile for solar water heating applications. The Helio-Flo comes factory assembled with all wiring, plumbing and fittings complete to minimize installation time.

The Helio-Flo comes with an optional advanced controller with built in Wi-Fi technology allowing for advanced features such as remote system monitoring, automated service reminders, system performance data storage and user friendly adjustable settings.

The Helio-Flo is assembled in Richmond California and will be available May, 2009.
