

Solar Boosted Gas Water Heater - All In One!

Heliodyne is now offering a compact, solar boosted, gas water heater for your home. This all in one package saves you space, money and optimizes your solar gain. If you need to replace your old gas water heater anyways, why not do it with a solar boosted system and protect yourself from rising energy prices. Help the Environment and reduce your gas bill (up to 70%) by having a Heliodyne system installed in your home today.

A Truly Unique Solar System

Your home's solar hot water system is only as good as its weakest link. Heliodyne has designed a complete package with only the best products on the market:

Helio-Pak

An all in one external heat transfer appliance with included Delta T Pro advanced controller for enhanced system monitoring efficiency.

- Smart controller minimizes gas heating usage
- Wi-fi enabled system performance monitoring with stored energy data (BTU, °F, GPM)
- 25% more efficient than conventional internal heat exchangers

Power Direct Gas Water Heater

75 gallon water heater comes with an integrated electronic gas control valve for more precise temperature control.

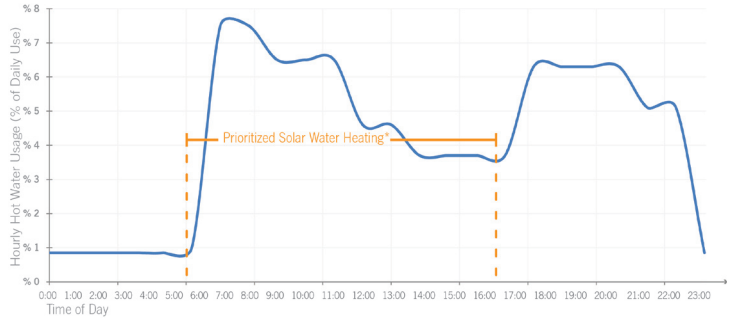

- Electrical ignition saves energy & money
- Industry leading gas burner efficiency
- 2" Non-CFC foam insulation for minimum heat loss & optimal performance

GOBI Solar Flat Plate Collectors

The GOBI collectors produce optimum heat absorption giving you the most out of your solar hot water system.

- Low-profile design for a subtle rooftop presence
- Certified to withstand a windload of 50 lbs per square foot
- Rated by SRCC as one of the best performing collectors on the market

Typical daily hot water usage in an American home

*The solar controller detects when hot water demand in the house is highest and will utilize the solar system most efficiently to meet that demand. Basically, it will prevent the gas burner to turn on if there is a chance that solar heating can supply the hot water demand to the home.

Package designed for a 3-4 person household includes:

- Heat exchanger (Helio-Pak 16 Heat Transfer Appliance)
- Advanced controller (Delta T Pro) with wi-fi capabilities
- 2 high efficiency solar collectors (GOBI 406)
- Collector flush mount assembly
- High efficiency gas water heater (75 gal.)

Heliodyne solar collectors conform to IAPMO and ASHRAE standards & guidelines. All Heliodyne packaged systems are OG300 certified by SRCC.

*Package price does not include installation or piping costs. Please consult your nearest authorized Heliodyne Dealer for an installation cost estimate.
