

HELIODYNE INSTALLATION HARDWARE RISSE SLEEVE

For snap-on insulation between collectors without cutting, fitting or taping

Heliodyne has developed a new waterproof insulating sleeve that is pre-formed and pre-cut for quick, snap-on installation between Heliodyne Gobi collectors. The Risse-Sleeve consists of waterproof closed cell insulation and an outer aluminum jacket for a professional appearance and outstanding durability. Low-cost and easy to install over Dyn-O-Seal unions, the Risse-Sleeve was created in response to field demand and will save substantial time in eliminating the need for laborious fitting, taping and painting of standard materials.
